

SEIBOLD SECURITY

FROM EVERY ANGLE

Whether you're open for business or closed for the night, you need to feel confident that your assets are secure 24/7/365. That means your access control and alarm systems, CCTV surveillance and fire alarms must give you full knowledge of any situation. So you can take decisive action on everything from parking issues to a break-in.

SECURE IN THE KNOWLEDGE.

WE'RE DEDICATED TO YOUR SECURITY. Seibold Security specializes in security systems that give you precisely the knowledge and confidence you need. For 25 years, we have been designing, implementing, servicing and supporting systems for Healthcare, University, Cultural Property and Commercial Markets. And what we've learned has led us to protect businesses of all sizes across the country. To receive client references, please call us at 800.333.1611.

FLEXIBLE, EASY-TO-USE SOFTWARE

Our Skyline by Seibold software is based on highly flexible architecture, often allowing us to integrate your legacy databases and proven hardware directly into your new security system. When you're ready to add new components, we'll be glad to reconfigure the software to incorporate the latest advances.

Skyline by Seibold lets your guard force monitor all security from a single control center. Our software is quick to learn and easy to use, so initial training and shift transitions go more smoothly—and you'll see a reduction in operator error and costs.

products & services

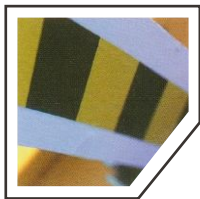

ID Management

Assign and print ID badges in minutes for full-time employees, maintenance staff, contractors and volunteers. Each ID is encoded with the person's picture and facility credentials as well as employment and emergency information. Our ID management system lets you review all records and reports directly from your control center.

Card Access

Use ID badges to control access to storage areas, administration and management offices, conversation areas and parking lots. Seibold Security can also combine your card access system with sensors and timers to fit your specific auto-arm requirements for any room.

Parking Controls

We understand that parking is important to your employees. So we help you manage your lots through access control, ID management and video surveillance systems.

Alarm Monitoring

From a single location, monitor the intrusion alarms and motion detectors installed throughout your facility.

Security Escort®

Our Security Escort system is

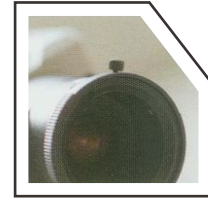

completely wireless, so you can outfit every guard with a transmitter that can be tracked to within 20 to 40 feet in any direction, including vertically. When an alarm is sounded, the transmitter sends personal and emergency information directly to your control center.

- Property Protection

Using the Security Escort infrastructure and a modified transmitter, you can protect assets such as computers and overhead projectors. The system gives you full control over exactly how the alarms are to be activated.

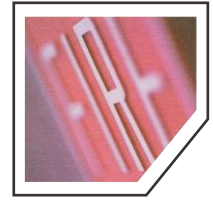

- Guard Tour

Monitor your guard tours and reroute them as needed. In extreme situations, Security Escort's "man-down" and lanyard-pull options ensure your guard force is always able to activate the alarm system.

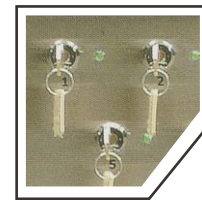

Video Surveillance (CCTV)

Our vandal-resistant cameras provide a clear picture of what's happening inside and out. We install discreet and conventional cameras in strategic locations, then link them to your subsystems and alarms for immediate camera call-up and recording.

Fire Alarm

Pinpoint the location of a fire from your control center and immediately call in the relevant cameras. Our fire system is designed to give you control over the door-release function in order to maintain security and conform to the latest life-safety requirements.

Key Management

You can secure access keys when not in use and reduce the number of times you need to re-key your entire facility. ID cards provide efficient and protected access to lockboxes strategically located throughout the building, so you know exactly who has what key at what time.

YOUR TEAM OF EXPERTS

Seibold Security works with you, your consultants and directors to thoroughly address all of your security concerns. Our experience is proven from design through implementation, service and support. So you can count on us to respond quickly at any point in the process, 24/7/365.

As your security needs change, your Personal Relationship Manager will be there to answer important questions. And you can rely on our team of expert system designers, programmers, customer service and technical support agents to understand your situation and get the job done right the first time.

ASK OUR CLIENTS

In 25 years we've worked with some of the most prominent businesses in the county. We promise to continue our dedication to the various markets we serve and to expand our expertise in your security needs.
